

# Proposal — Gurukrupa Eye Hospital Patient-Flow System

Gurukrupa Eye Hospital & Research Center · Dr. Anu Juneja Pathak

---

## 1. Core In-App System

### Patient Queue

- Configurable stages: Registration → Pre-testing → With Doctor → Dilating-Wait → Billing → Done
- Live waiting-time tracking per patient, per stage
- Mobile-friendly stacked-card view on every screen (not just the queue) — no sideways scrolling on a phone

### Patient Details & Intake

- Full patient record: contact details, occupation, screen-time, existing medical conditions, referral source (incl. BNI), preferred language
- "Last visited" — automatically recognizes a returning patient by phone number and surfaces their last visit, across separate visits over time

### Machines — pre-test capture

- Dedicated screen to capture a machine's printout for any patient, at any stage — not tied to Pre-testing specifically, since tests can happen before, during, or after the doctor
- Seven machine templates with fixed-layout OCR: HNT-1P (IOP/CCT), HRK-8000A (Refraction & Keratometry), CLM-1 (current glasses), YPC-100K (Refraction & Keratometry), TBUT/Schirmer
- Photo capture is mobile-only (matches how a camera is actually used); desktop displays results only
- Works with a poor connection: photos save on-device and upload automatically once back online — nothing is lost to a bad signal
- Upload and processing are separate — staff move on immediately after the photo; extracted values appear a short while later, automatically, wherever that patient's record is open

### With the Doctor

- Persistent patient summary — background, history, and prior readings visible at every stage
- Doctor's notes and exam-photo capture (Adnexa, Ant. Seg., Lens, Fundus)

### Dilation Protocol

- Admin-configurable drop sequence
- Auto-advancing timer per drop, with overdue alerts — the original problem this project set out to solve

### OT / Surgery

- A real, bookable time-slot calendar — the one part of the system that isn't walk-in, since surgery genuinely needs advance scheduling
- Pre-op biometry surfaced automatically from Machines captures
- Operative details: IOL brand/power, technique, anesthesia, complications
- Surgical consent capture, post-op follow-up tracking, final prescription
- Surgical/package billing — Monofocal / Multifocal / Toric tiers, Medicaid flag

### Appointments

- Day-based booking — no fixed time slots, matching how the clinic actually runs (seen in order of arrival)
- Tracks how each patient was booked — WhatsApp, phone, or walk-in

### Billing & Inventory

- OPD billing — line items, payment modes
- Stock levels that deduct automatically as dilation drops and prescribed medicines are dispensed

### Admin

- Configurable process stages, dilation protocol, and referral sources
- DPDP-aligned foundations: itemized consent, audit trail

|                           |                  |
|---------------------------|------------------|
| <b>Core In-App System</b> | <b>₹1,09,150</b> |
|---------------------------|------------------|

## 2. MR (Medical Representative) Visits — Add-on

- Visit log, plus a full history of every medicine a given rep has ever supplied, on tap

|                  |               |
|------------------|---------------|
| <b>MR Visits</b> | <b>₹3,150</b> |
|------------------|---------------|

## 3. Prescription System

- Searchable medicine matching; treatment plan (dosage, frequency, duration) captured separately from quantity dispensed, so it can't accidentally throw off stock counts
- Printed prescription — complete with treatment plan and quantity given, formal enough to replace handwriting and attach to the patient's file
- Shown automatically in the patient's preferred language — English, Hindi, or Gujarati
- Quantity dispensed automatically adjusts inventory — editing or removing a medicine correctly adjusts or restocks stock levels

|                            |               |
|----------------------------|---------------|
| <b>Prescription System</b> | <b>₹8,550</b> |
|----------------------------|---------------|

## 4. Login & Access Control

- Staff sign-in required to use the system
- Role-based access — Admin decides exactly which screens each role (Reception, Doctor, Pharmacist, etc.) can see
- Fully configurable by Admin — add or remove staff, change roles, adjust what each role can access, all without needing a developer

|                                   |               |
|-----------------------------------|---------------|
| <b>Login &amp; Access Control</b> | <b>₹9,000</b> |
|-----------------------------------|---------------|

### Investment

|                                                              |                  |
|--------------------------------------------------------------|------------------|
| Subtotal                                                     | ₹1,29,850        |
| Prescription System + Login & Access — included at no charge | - ₹17,550        |
| Final Total                                                  | <b>₹1,12,300</b> |

### Payment schedule

| <b>Installment</b>      | <b>Amount</b> |
|-------------------------|---------------|
| Advance (to begin work) | ₹5,000        |

|               |               |
|---------------|---------------|
| 1st (Month 1) | ₹20,000       |
| 2nd (Month 2) | ₹20,000       |
| 3rd (Month 3) | ₹20,000       |
| 4th (Month 4) | ₹20,000       |
| 5th (Month 5) | ₹20,000       |
| 6th (balance) | <b>₹7,300</b> |

*This is the complete, all-in price for the tool as scoped here — every segment above is included.*

## 5. Monthly Operating Costs

Recurring costs to keep the system running — separate from the one-time build price above. This is what it costs every month, whether or not any further development happens.

| Item                          | Monthly cost  | Status    |
|-------------------------------|---------------|-----------|
| Hosting — VPS (Mumbai, India) | ₹999          | Confirmed |
| SSL certificate               | ₹0 (included) | Confirmed |

**Estimated monthly total: ~₹999/month.**

*Not monthly, but relevant: a domain name, if not already owned, is a small annual fee, not monthly.*

## What's Next — Phase 2

WhatsApp automations (appointment booking bot, follow-up reminders, and treatment-based care messages) are planned as a separate phase, priced separately once this core system is live and running. They're not included in the price above.

## Honest notes

- The hosting figure is the real renewal price, not a discounted first-term rate.
